

## Bio-Synthesis™ LED

Enjoy an age defying, healthier, more youthful appearance with the revolutionary LED technology: Bio-Synthesis™. The Bio-Synthesis™ light activated rejuvenation system utilises high intensity light emitting diodes [LED's] which allow your clinician to quickly create customised LED services to address your specific skin concerns.

Choose from 6 different Bio-Synthesis™ LED facials:

- Age-Defying Chromatic Facial
- Hydrating Chromatic Facial
- Brightening Chromatic Facial
- Clearing Chromatic Facial
- Calming Chromatic Facial
- Advanced Chromatic Facial

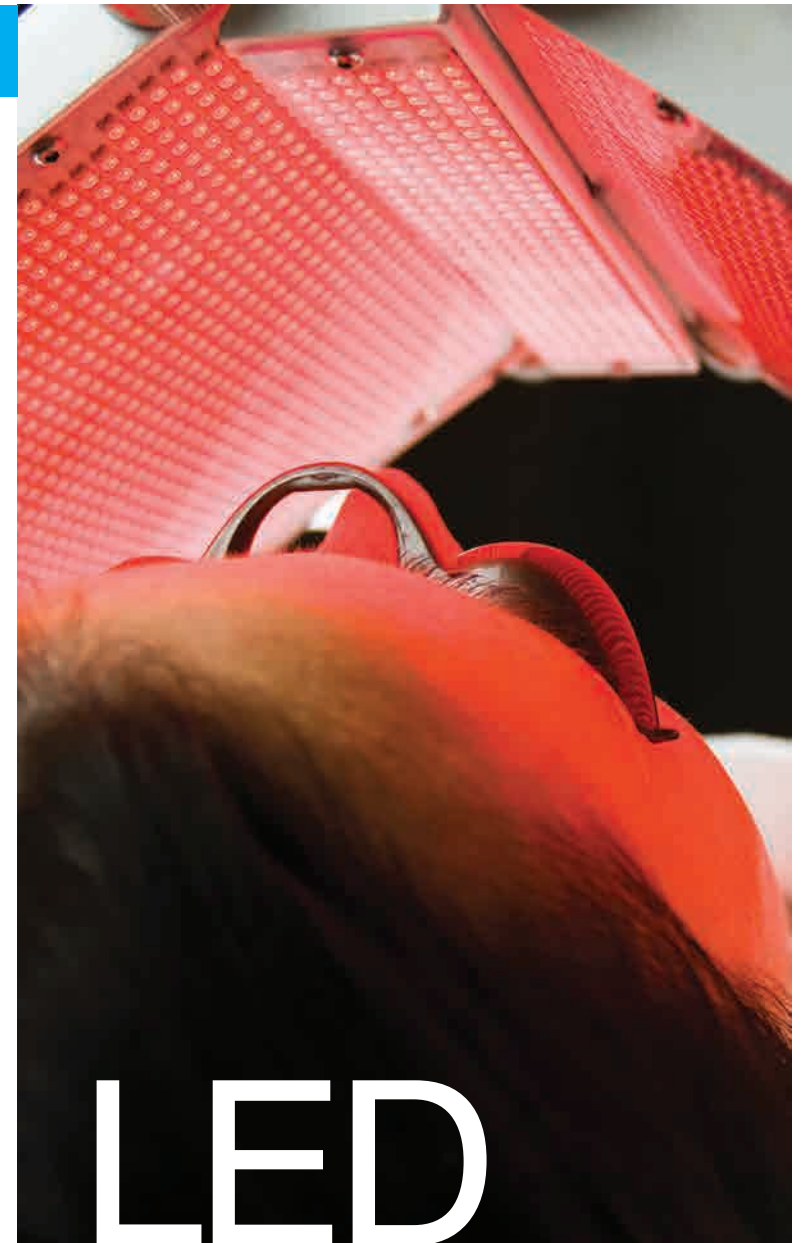

Bio-Synthesis™ LED technology incorporates over 4000 individual LED lights in a combination of red, yellow, green and blue to provide powerful skin correcting results.

LED light therapy with Bio-Synthesis™:

- Refines skin tone and texture
- Reduces fine lines and wrinkles
- Clears acne and prevents future breakouts
- Targets redness, facial flushing and rosacea
- Addresses sun damage and pigmentation
- Involves no discomfort or downtime
- Encourages a healthier, more youthful appearance

## What LED Is Right For Me?

### Blue Light LED

Works to reduce acne causing bacteria, clear skin and reduce congestion

### Red Light LED

Increases blood circulation and lymphatic flow, encouraging the renewal and revitalisation of ageing skin

### Green Light LED

Targets skin tone correction and detoxifies the skin to reduce redness and irritation

### Yellow Light LED

Boosts the skins collagen production capacity to naturally heal and rejuvenate

Your clinician will conduct a detailed consultation to match your individual skin needs with the right LED treatment.

## Frequently Asked Questions

### What is a LED Facial treatment?

LED treatments with Bio-Synthesis™ utilise over 4000 powerful LED lights - red, yellow, green and blue - which are switched from colour to colour depending on the course of treatment required. These target a diverse range of common skin concerns including acne, congestion, redness, pigmentation, uneven tone and texture, fine lines, wrinkles and signs of ageing on the face, neck and décolletage.

### Are LED Facials suitable for me?

Treatments are suitable for all skin types and concerns and will be customised for you based on your individual skin needs. Your clinician will complete a consultation to select the right treatment plan for you, and assess your suitability for LED.

### How many treatments are required before I can see results?

Most LED clients will experience a visible improvement from their first treatment. To achieve optimal results, we recommend a series of 6-8 LED facials.

### How long do LED treatments take?

While most clients will spend 20 minutes under the Bio-Synthesis™ LED device during their facial, LED treatments are often combined with other facial services to enhance treatment outcomes. Ask your clinician for more information about the LED facial services they provide.

### Can Bio-Synthesis™ LED treatments be combined with other technology services?

LED makes an ideal addition to other technology enhanced facials and can be combined with services such as microdermabrasion, hydrodermabrasion and oxygen facials.
